

**ABSTRACT**

A double-faced splicing tape of the present invention  
splices a first web used for forming a tobacco rod and a  
5 second web in a stand-by state to and has a plurality of  
perforations extending in a longitudinal direction of the  
webs. Furthermore, the present invention provides a  
feeding device for making the double-faced splicing tape  
hang toward a feeding position located in between a main  
10 delivery path of the first web and a sub-delivery path of  
the second web.
